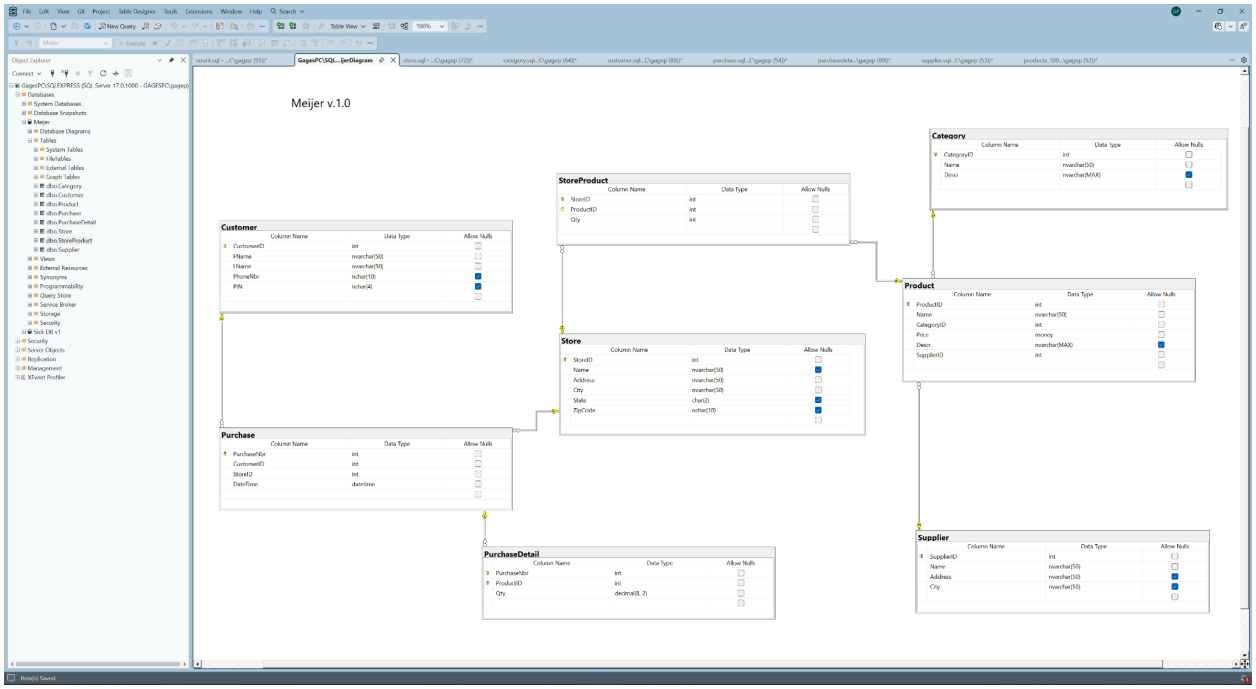
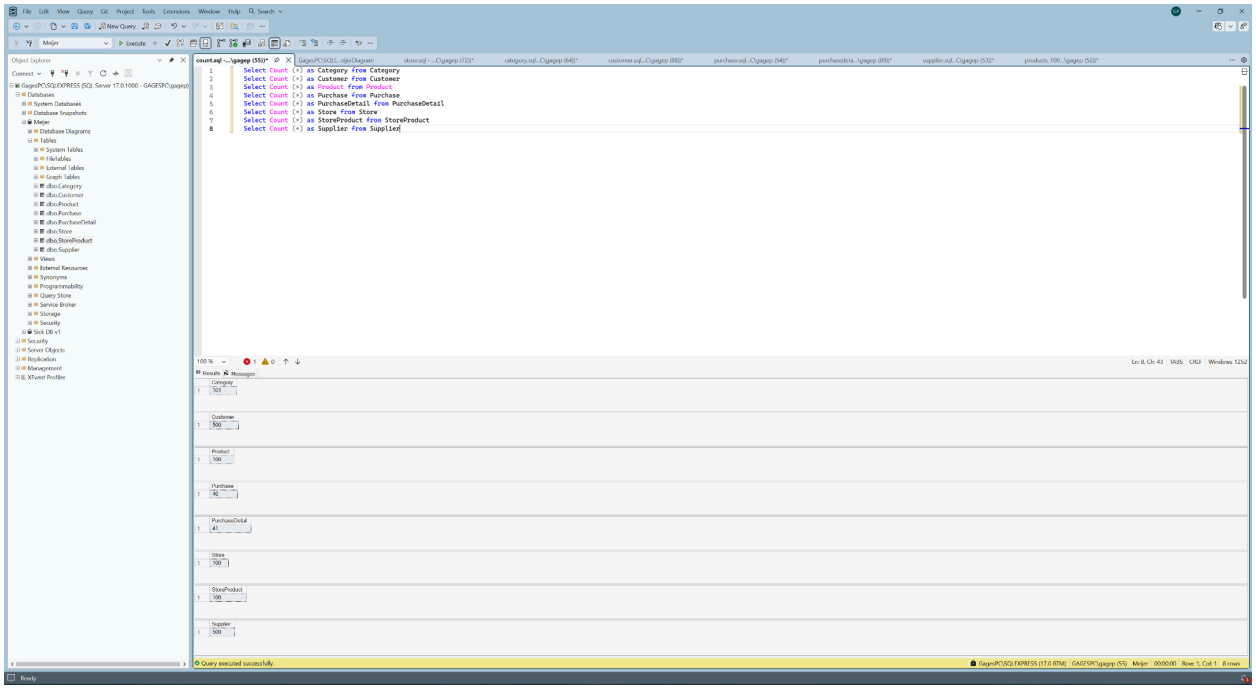
Database Digram



Notes:

This is our second database design for ISIN 325 titled Meijer. Our tables consist of Category, Customer, Product, Purchase, PurchaseDetail, Store, StoreProduct, and Supplier.

Count of All Tables



Notes:

This script is used to verify that all tables in the database were successfully populated with data by counting the total number of records in each table, including Category, Customer, Product, Purchase, PurchaseDetail, Store, StoreProduct, and Supplier. Each statement returns the number of rows in a table, which allows us to quickly confirm that the insert scripts worked correctly and that no tables are empty or missing data.

Database and Relationships

This is our second database design for ISIN 325 titled Meijer. This database allows the business to monitor sales, manage inventory, and keep records of transactions while making sure all data is connected and easy to access. The database is designed to provide an organized framework which enables the company to track product sales and their respective sales locations and customer purchasing behavior. The Purchase and PurchaseDetail tables connect customers to the products they buy by recording when a purchase happens and which items were included in each transaction. The system enables users to monitor customer behavior while identifying the specific store that processed the customer transaction. The StoreProduct table helps manage inventory by showing how many of each product is available at each store which helps prevent stock shortages and keeps inventory organized. The Product table acts as a central hub by organizing items into categories and linking them to suppliers which makes restocking and supplier management more efficient. The combination of these tables produces a straightforward system which enables stores to operate their daily activities while monitoring their sales performance and making better choices.

Install/Populate Scripts

Please Ctrl click on this link below to be directed to my google drive. Inside you will find all of my scripts to install and populate the database design 2
